Architecture Review Process, Part 1

ARTIFACTS

01 INITIATIVE OVERVIEW

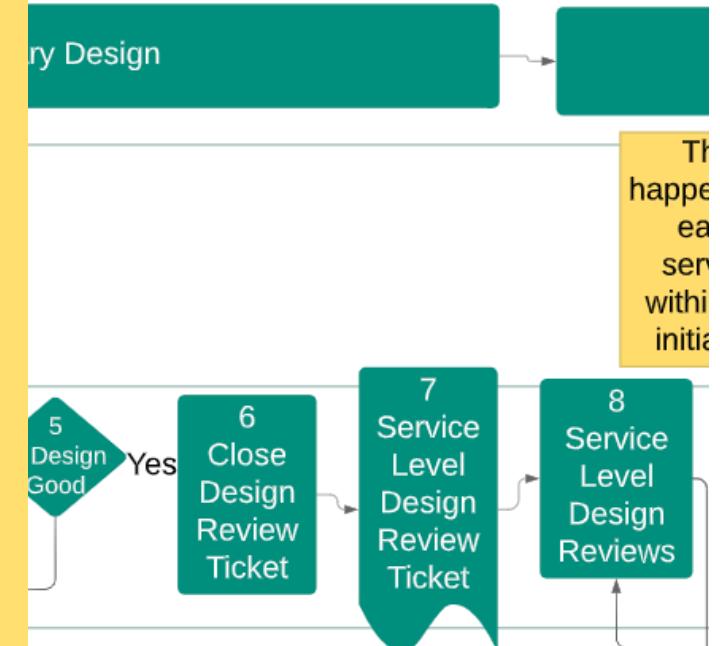

Created by Initiative Owner and Initiative Architect from Confluence; first step of ARP.

03 PRODUCT FEASIBILITY AND DESIGN

Created in Confluence and linked to Initiative ticket by Initiative Owner; same as last iteration with exception of Section D, which introduces artifact requirements.

02 INITIATIVE TICKET

Created by Initiative Owner in Jira; the tracking issue which carries Confluence documents and artifacts to downstream reviewers.

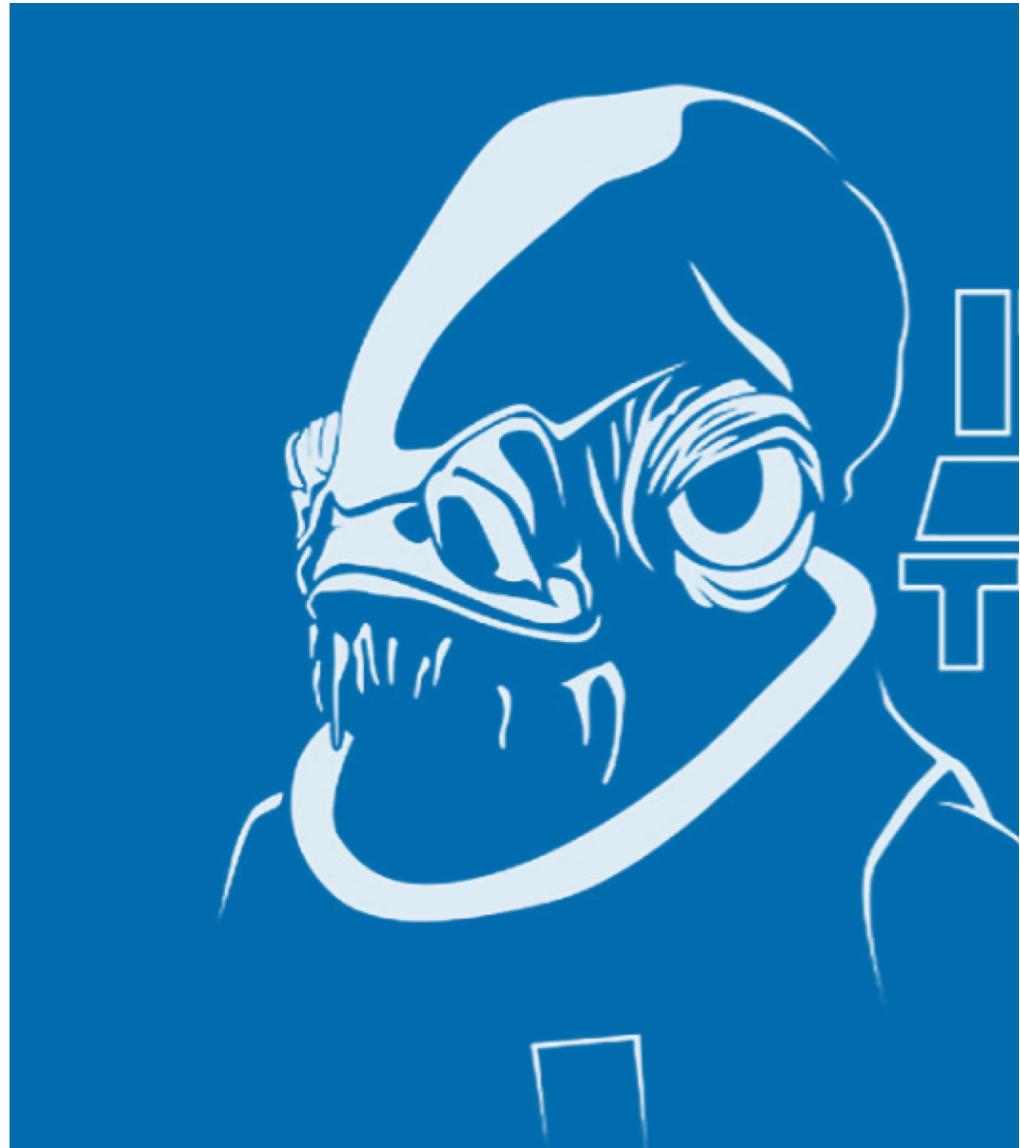

**... on the other side of a galaxy, far, far
away**

The big, hairy idea. Vader and I have worked together on big projects before. Nothing like this though. I really need his architectural skills to flesh out the concept. The idea is simple enough. But others are already in development with similar concepts. Fingers crossed we fly through the Framework and get this into development. But then there's the new Architecture Review Process.

Boba's hair brained idea.

Every year, same thing. Post-SAPPHIRE onslaught, all sitting in my Kanban board. Waiting for me. What's this? Boba wants to build an NLP engine for Huttese? With blockchain? Ridiculous. But with Vader? Interest.

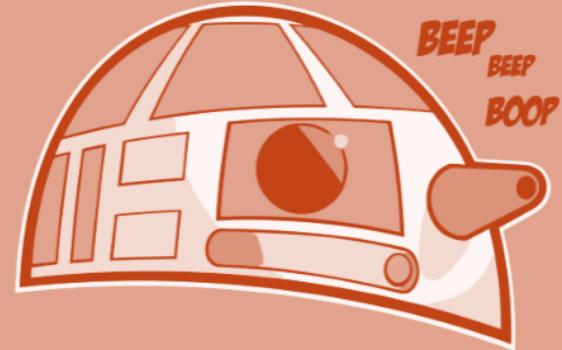

A dramatic scene from Star Wars: Episode V - The Empire Strikes Back. Boba Fett, in his signature black armor and helmet, stands on the right, his blue lightsaber held ready. Opposing him is Yoda, the small green Jedi master, also with his blue lightsaber drawn. The two blades clash in the center, creating a bright, glowing intersection of light against a dark, smoky background. The image captures the intensity of their duel.

Boba's reviews. An NLP engine
for Huttese, built on top of blockchain?
Boba is truly a master. I don't know
much about blockchain, and we'll need
to bring in core service, at the least. This
might take cycles.

Our buddy Boba. Hey, it's an assignment from Boba. Love that guy. Always bringing stuff. Still remember the taco truck. Got him a lot of goodwill from the scrum team. It'll be nice to work with him again. New process though. Lots of artifact requirements. Need to plan with the team. The Architectural Checklist is extensive. Same with the Service Level Checklist. And meetings? Better believe we're going to Fogo.

Begin the Initiative

- 01** From Confluence, choose Create and search for the Initiative Overview template; alternatively you can scroll down.
- 02** This will open the template in Editing mode. Pausing for a moment, you should see at the top of the page font and formatting options, and at the bottom right, the ability to Publish.
- 03** As the template itself is simply a page, there are no required fields. This is not a form. It is a document template that is stored on Confluence for review later on in the process.
- 04** While in Edit mode, fill in the fields you think would best describe your initiative, the stakeholders, and anything else you think is pertinent. It's ok to leave things blank as this is a living document, and you may return to it many times as situations shift and conditions change. When done, publish.

With the IO still open in Confluence (actually, you should keep Confluence open for the rest of this course), find Share and copy the url of the IO.

01

Launch JIRA UAT (this is the testing system for Jira) and find Create. For Project, find or select INIT. For issue type, find or select Initiative.

02

There's an overwhelming number of fields to fill and things to select. We get it. The process though is still not 100% baked. We'll be working on a data definition table once we're there.

03

For now, just give the Initiative the same title as the IO, Assign it to yourself ("me"), and paste the url of the IO you copied back in Confluence, in the correct field.

04

As with most forms, the only required fields are the ones with a red asterisk.

05

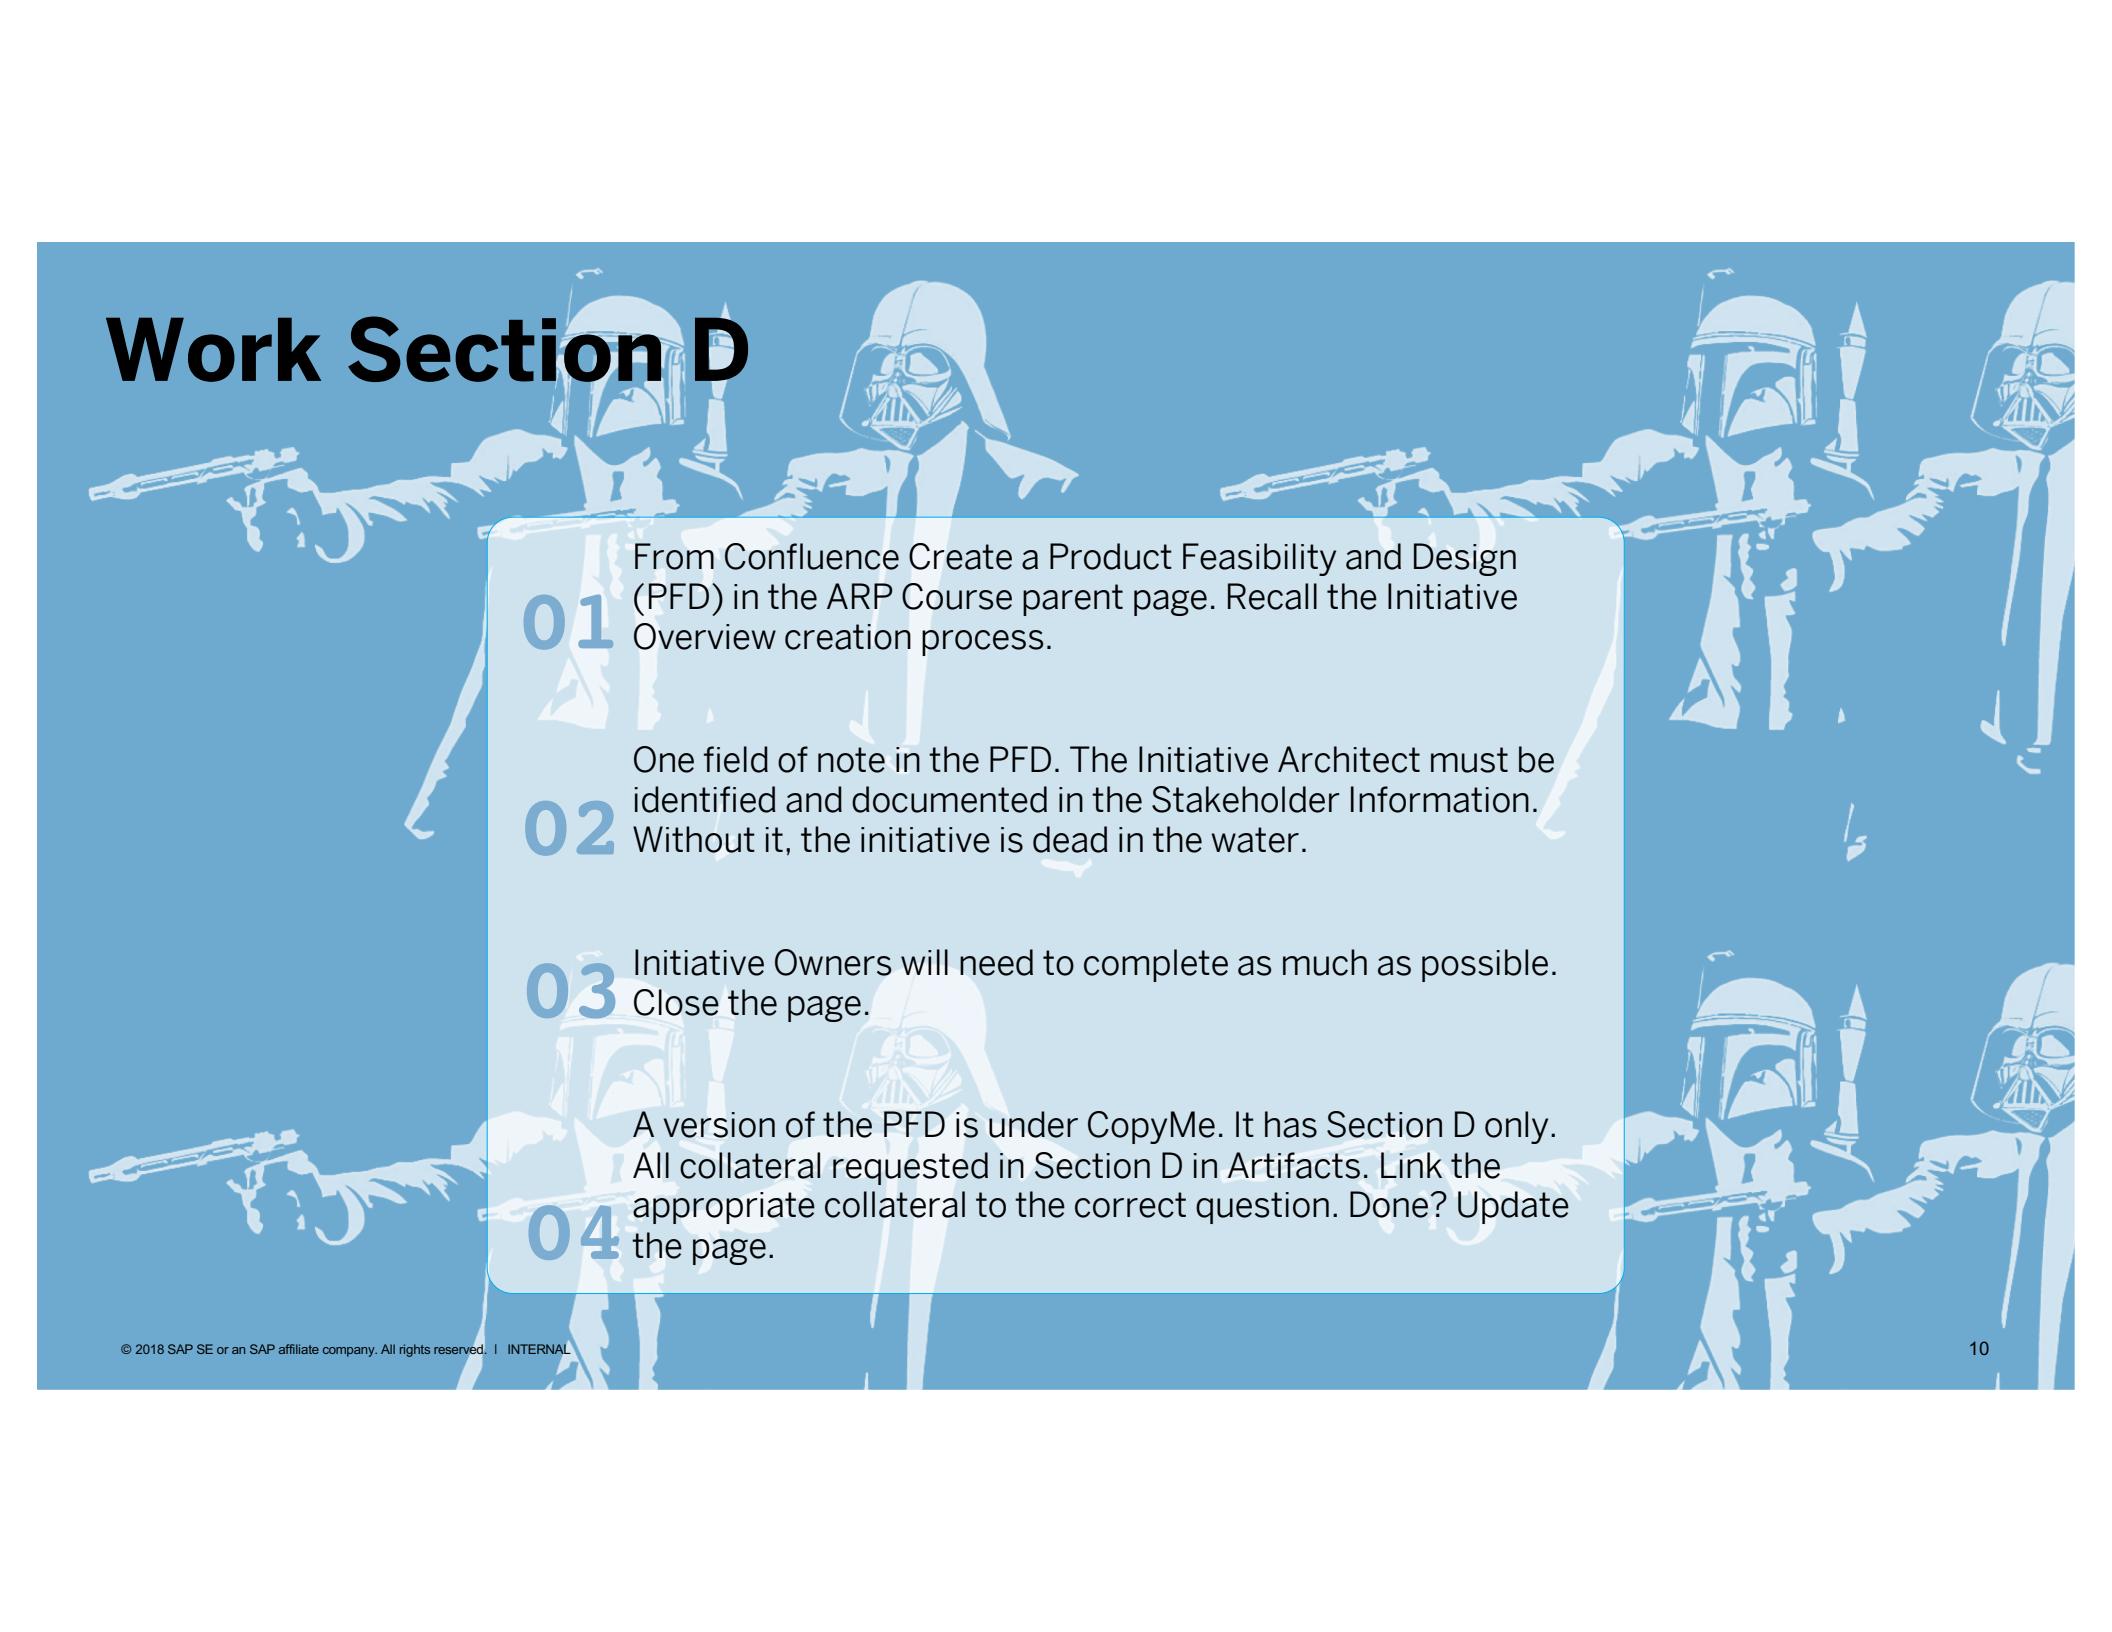

Last step is to Create, at the bottom.

06

Track the Initiative

Work Section D

- 
- 01** From Confluence Create a Product Feasibility and Design (PFD) in the ARP Course parent page. Recall the Initiative Overview creation process.
 - 02** One field of note in the PFD. The Initiative Architect must be identified and documented in the Stakeholder Information. Without it, the initiative is dead in the water.
 - 03** Initiative Owners will need to complete as much as possible. Close the page.
 - 04** A version of the PFD is under CopyMe. It has Section D only. All collateral requested in Section D in Artifacts. Link the appropriate collateral to the correct question. Done? Update the page.

... the saga continues
